### **DETAILED ACTION**

1. This is the first Office Action.
2. Claims 1-21, 24-26, 28 and 31-42 are pending.

### **EXAMINER'S AMENDMENT**

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. James J. Napoli on April 9, 2008.

4. Claim 8: line 3, after the words "which are" delete the word "obtainable", and insert the word --produced--;

Line 5, after the words "polyalcohol A<sub>i</sub>" delete the words "has Z<sub>i</sub> hydroxyl functions".

5. Claim 24: line 4, after the word "ester" insert the words --of the-- ;

### ***Allowable Subject Matter***

6. Claims 1-21, 24-26, 28 and 31-42 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the present claims are allowable over the closest references: Shibata et al. (U.

S. Patent 6,673,885 and WO 01/10920) and Hiede et al. (U. S. Patent Application Publication 2004/0014901).

Shibata discloses a process for preparing a (meth)acrylic acid-based polymer having a stable quality and suitable as a dispersant for cement. The process for preparing a (meth)acrylic acid-based polymer, comprises the steps of the stage 1 of introducing (meth)acrylic acid and a polyalkylene glycol monoalkyl ether at a molar ratio in the range of 3:1 to 50:1, subjecting them to an esterification reaction in the presence of an acid catalyst and a polymerization inhibitor and deactivating the acid catalyst with an alkaline agent in order to obtain an esterification product containing a (meth)acrylate and (meth)acrylic acid residues and the stage 2 of copolymerizing the (meth)acrylate and the (meth)acrylic acid residues at a pH value in the range of 1.5 to 3.5 (abstract).

Heide discloses a cross-linked, water-swellable polymer that contains polymerized into it moieties of a) water-soluble, monoethylenically unsaturated monomers, and b) 0.001 to 5 mole % based on the monomers a) of a cross-linking combination, b1) a first cross-linking agent with at least two (meth)acrylic ester moieties in the molecule and b2) a second cross-linking agent with at least two (meth)allyloxy moieties in the molecule, the molar ratio of b1) to b2) ranging from 0.7:1 to 10:1. The polymer has a balanced property profile as regards absorptivity, gel strength, absorption speed and extractable components and can be advantageously produced by a continuous method (abstract).

However, the above mentioned references do not disclose or fairly suggest a mixture of at least two compounds each having at least two double bonds, said mixture

having a WFR from 240 to 600 g/mol of double bond and at least two of said compounds each comprising at least two (meth) acrylic esters as double bond component represented by the formulas according to instant claim 1.

7. As of the date of this Notice of Allowability, the Examiner has not located or identified any reference that can be used singularly or in combination with another reference including Shibata et al. and Heide et al. to render the present invention anticipated or obvious to one of ordinary skill in the art.

8. In the light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delay, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reason for Allowance".
